

C-COLLECT® Analysis Tools

C-COLLECT® Analysis Tools Provide a Simple Solution for Complex Data

C-COLLECT® Software

Works with CHORE-TRONICS® Controls to provide easy access to house conditions and trends – daily, or as frequently as you wish.

- Use C-COLLECT® software to tell the controls what data to gather, to gather the data (or load it from your C-COLLECT Data Courier), to analyze the data, and to generate user-defined reports, automatically or on demand.
- Print reports, view them on screen, or use electronic options to create an e-mailable PDF or a web-compatible page for posting where you wish.
- Data is encrypted during transfer and is stored in a SQL database. Amount of data to be stored is limited only by the size of your hard drive or external storage.

Manage live production better than ever before. No more waiting for a weekly performance report before taking action.

- Optimum scheduling of bird harvests and feed deliveries based on performance data.
- Establish and refine proven standards, evaluate growth variables, identify and quickly correct negative trends, and meet mandated requirements, resulting in better bird performance.

C-COLLECT® Software is a powerful database tool for data storage and analysis to help give you the best possible return on your investment.

C-CENTRAL™ Professional Software is also available for remote setting and monitoring of your CHORE-TRONICS® Controls.
